TUGAS PRAKTIKUM

SOAL 1

Buatlah bahasa program semenarik dan sekreatif mungkin yang memuat pengkondisian dan perulangan untuk menampilkan tabel penjumlahan dan perkalian n x n, untuk $1 \le n \le 10$ dengan n diinputkan dari keyboard.

1.1. ALGORITMA

- 1. Impor modul `tabulate`.
- 2. Buat fungsi `tabel_perkalian(n)` untuk membuat tabel perkalian n x n.
- 3. Buat fungsi `tabel_penjumlahan(n)` untuk membuat tabel penjumlahan n x n.
- 4. Buat loop utama yang akan terus berjalan.
- 5. Tampilkan menu pilihan kepada pengguna (tabel perkalian, tabel penjumlahan, atau keluar).
- 6. Terima input pilihan dari pengguna.
- 7. Jika pilihan adalah untuk keluar, keluarkan dari loop.
- 8. Jika pilihan adalah untuk membuat tabel, minta pengguna untuk memasukkan angka n (1 \leq n \leq 10).
- 9. Validasi input n, jika tidak valid, minta masukan ulang.
- 10. Buat dan tampilkan tabel perkalian atau penjumlahan sesuai dengan pilihan pengguna.
- 11. Jika pilihan tidak valid, tampilkan pesan kesalahan.
- 12. Ulangi proses dari langkah 4 sampai pengguna memilih untuk keluar.

1.3 OUTPUT

Input

```
import tabulate
     def tabel_perkalian(n):
  4 5
        tabel = []
        for i in range(1, n + 1):
           baris = []
          for j in range(1, n + 1):
baris.append(i * j)
           tabel.append(baris)
        header = [str(i) for i in range(1, n + 1)]
        print("\nTabel Perkalian:")
        print(tabulate.tabulate(tabel,
      headers=header, tablefmt="grid"))
     def tabel_penjumlahan(n):
        tabel = []
        for i in range(1, n + 1):
baris = []
           for j in range(1, n + 1):
             baris.append(i + j)
        tabel.append(baris)
header = [str(i) for i in range(1, n + 1)]
print("\nTabel Penjumlahan:")
        print(tabulate.tabulate(tabel,
      headers=header, tablefmt="grid"))
      while True:
        print("\nMENU:\n1. Tabel Perkalian\n2.
      Tabel Penjumlahan\n3. Keluar")
        pilihan = input("Masukkan pilihan Anda: ")
        if pilihan in ['1', '2', '3']:
if pilihan == '3':
             print("Keluar...")
             break
          n = 0
          while True:
            n = int(input("Masukkan sebuah angka
      (1 <= n <= 10): "))
            if 1 <= n <= 10:
                break
             else:
                print("Masukan tidak valid. Harap
      masukkan angka antara 1 dan 10.")
          if pilihan == '1':
             tabel_perkalian(n)
           else:
             tabel_penjumlahan(n)
        else:
          print("Pilihan tidak valid. Harap
      masukkan 1, 2, atau 3.")
Tab
```

```
Output
